

Temporary exclusion zone

Ichthys LNG Module Offloading Facility (MOF)

INPEX is committed to sharing Darwin Harbour safely with all recreational and commercial users.

We wish to advise of planned maintenance works at the Ichthys LNG Module Offloading Facility (MOF).

Safety considerations

From now through to late October 2024, scaffolding will be erected in sections along the MOF perimeter to gain access to the sheet pile structure.

To ensure personnel and community safety, the Regional Harbour Master has declared a temporary 25 metre exclusion zone around the MOF perimeter for the duration of these planned works.

This exclusion zone is detailed in the map to the right and the boundary is clearly marked by yellow buoys.

All Harbour users are advised to observe the Harbourmaster's marine safety zone, available at – nt.gov.au/marine/marine-safety

The MOF will undergo a multi-stage refurbishment and recertification campaign to preserve the integrity of the structure for future use.
